

Fire Sign

Double Sided Installation Instructions

- A - Your Fire Sign is NOT metal, has rounded corners and is flexible for safety reasons. The sign's attachment hardware allows the entire sign to flex should a person or object strike it. Safety is important in our signs just as it is elsewhere in your facility.
- B - Each sign takes two attachment holders which have a permanent adhesive on the back. Each holder should be approximately 1 1/2 to 2 inches from the sign top and bottom.
- C - Push each holder firmly into place on the sign making sure it is all the way to the holder back. The holder is designed to grip the sign so it can not be easily removed.
- D - Peel the protective backing off the adhesive and CAREFULLY position your sign where you want to place it on the wall and press firmly into place. The adhesive is permanent so make sure you are careful and positioned properly.

Thank You for the opportunity to be of service.
